

HYBRID VIDEO SOLUTION

- Software Economics
- HD Quality Collaboration
- Reliable Performance
- Global Scalability
- Investment Protection
- Seamless Integration

Leverage Your Existing Equipment

Now there's a better way to meet using everyday devices and IP networks, with the power of video collaboration at your fingertips.

Hybrid Video Solution, native HD and multipoint capability combine high resolution and fidelity with incredibly low latency, even over the public internet. With click-to-connect simplicity, guests can participate with multi-party content sharing, a Vidyo-exclusive feature where multiple participants can share content into the conference at the same time.

Vidyo apps and plug-ins run on the computers and mobile devices you already own, and is as affordable as a voice-only call. While legacy systems lock you into old standards and equipment, all Vidyo components are software-upgradable to deliver new features and enhanced performance. To extend the life of legacy systems, H.323 and SIP connections are delivered by the VidyoGateway™ and through the free VidyoWay® interconnectivity service.

Call us today to experience HD Video Conferencing with business quality, flexibility, and reliability.
